Сетки

Стандартный поток

Поток документа - это отображение элементов "один-за-другим". Блочные элементы появляются друг <u>под</u> другом, строчные друг <u>за</u> другом.

Сетки (Layouts)

Сетки задают визуальную структуру документа с разделением на ряды и колонки. Например, так:

Внутри каждого блока сетки элементы опять располагаются в стандартном потоке: блочно или строчно

Как создать?

1

Добавить контейнер для ряда

2

Добавить контейнеры для колонок

3

Оформить колонки как колонки

Как использовать?

Добавить контент и получить результат

Карта сайта и layouts

Структура сайта: количество и смысл страниц, их взаимосвязь плюс примерное расположение элементов на каждой странице, оформляется либо на бумаге/салфетке/доске, либо в программе для скетчинга.

Прототипы страниц

Создание интерактивных прототипов (в том числе с финальным контентом) – отличный инструмент для проверки все ли поместилось и воспринимается ли сайт так, как должен. Можно создавать локально и публиковать в сети (прототипы кликабельны) или создавать в облаке.

Отрисовка

И наконец: создание векторных объектов, теней, переходов, декоративных элементов, использование максимума функций редактора для веб-дизайна. Создание финального дизайна страниц в Photoshop и даже в Illustrator. Подготовка к верстке.

Почему так получилось?

Инлайн-блоки думают, что они – слова.

Между словами всегда остается пробел, а значит общая ширина уже не 100%, а чуть больше

Если одно слово КРУПНЕЕ другого, они выравниваются по базовой линии, а не по верху

Теперь тремя простыми строчками мы научим блоки вести себя хорошо

```css
.row {
font-size: 0;
}

.column{
    font-size: 16 px;
    display: inline-block;
    width: 33.3%;
    vertical-align: top;
}
```

CSS

Коварно избавимся от пробелов :)

Настроим выравнивание по-вертикали

Почему так получилось?

Родитель дискриминирует флоутнутые элементы

Пока внутри есть элементы в нормальном потоке, высота считается по ним.

Если элементов в нормальном потоке нет - элемент считает высоту контента нулевой

Как быть?
